

Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-6684
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives – what they Say, Think, Do, and Feel – in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I have amazing story ideas, but I can't draw comic panels or characters at all." • "Hiring digital illustrators or artists is way out of my budget." • "Current AI generators give inconsistent character designs across different scenes." • "I want a tool that writes scripts and draws matched comic strips automatically."	THINKS • How can I convert my plain text concepts into visual graphic comics quickly? • Will the AI maintain character identity across all sequential panels? • Can I easily tweak dialogue or panel layouts without starting from scratch? • Is there a platform that handles both narrative script generation and artwork seamlessly?
DOES • Jots down creative story plots, scripts, and world-building notes on notebooks. • Experiments with existing AI image tools but gets frustratingly non-continuous visuals. • Searches for easy-to-use storyboarding platforms with built-in comic layouts. • Shares early draft concepts with peers and community groups to get feedback.	FEELS • Frustrated by the steep technical learning curve of complex digital art software. • Excited by Gemini AI's potential to instantly bring creative imaginations to life. • Overwhelmed by manual repetitive panel creation and image editing. • Eager to publish and share full visual storybooks with a broader audience.
