

ComicCraft

AI Comic Story Creator using Gemini Models

TEAM ID

SWTID-2026-6684

SUBMISSION DATE

29 September 2026

Project Overview

ComicCraft is an innovative, AI-powered platform designed to transform narrative text ideas into visually engaging, panel-by-panel digital comic books. Utilizing multimodal Gemini models, the platform seamlessly crafts detailed storyboards, character profiles, dialogue scripts, and visual scene prompts to automate the comic creation pipeline.

Key Features & Capabilities

- **Automated Script & Storyboard Generation:** Generates cohesive multi-panel storylines with structured scene breakdowns and dynamic dialogue.
- **Character Consistency Engine:** Maintains character visual traits and personalities across multiple frames using structured prompt parameters.
- **Interactive Editing Suite:** Allows creators to adjust panel layouts, refine dialogue, and regenerate individual scenes on demand.
- **Export Options:** Supports high-resolution exports suitable for digital publishing and print media formats (PDF, CBZ, JPEG).

Technical Architecture & Tech Stack

The project leverages state-of-the-art web technologies and AI models:

Google Gemini API

Python

FastAPI / Flask

React / Next.js

Tailwind CSS

WeasyPrint

Project Objectives & Vision

ComicCraft aims to democratize comic creation for writers, educators, and content creators by dramatically lowering the barrier to entry for visual storytelling. By combining state-of-the-art language and vision capabilities, the platform bridges the gap between text-based concepts and rich visual storytelling.
