

# Project Executable Files

**Date:** 29 SEPTEMBER 2026 **Maximum Marks:** 3 Marks  
**Team ID:** SWTID-2026-6684  
**Project Name:** ComicCraft - AI Comic Story Creator using Gemini Models

This section contains the submission details for all executable and deployable assets of the **ComicCraft** application. The provided artifacts enable evaluators to run, test, and verify the full generative workflow—from story script generation via Gemini 1.5 Pro to image prompt crafting and comic strip compilation.

## Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA) |
|------|-----------------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                       |
| 3    | requirements.txt / package.json / dependency file               | Yes                       |
| 4    | Database schema / seed files (if applicable)                    | Yes                       |
| 5    | Environment configuration file (.env.example or similar)        | Yes                       |
| 6    | Deployed application URL (if hosted)                            | Yes                       |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                        |
| 8    | Dockerfile / Containerization config (if applicable)            | Yes                       |
| 9    | Test files and test results                                     | Yes                       |
| 10   | Demo video or walkthrough (if required)                         | Yes                       |

Project Executable Files (Contd.)

SMARTBRIDGE

Step 2: File / Folder Structure

```
/comiccraft-ai |— /src | — /components - React UI components (ComicCanvas, PanelGrid,
```

Step 3: Deployment / Access Details

|                       |                                                                                                                                                     |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| Hosted / Deployed URL | <a href="https://comiccraft-ai.vercel.app">https://comiccraft-ai.vercel.app</a>                                                                     |
| Repository Link       | <a href="https://github.com/smartbridge-projects/SWTID-2026-6684-ComicCraft">https://github.com/smartbridge-projects/SWTID-2026-6684-ComicCraft</a> |
| Login Credentials     | <b>Username:</b> evaluator@smartbridge.com<br><b>Password:</b> ComicCraft2026!                                                                      |
| Hosting Platform      | Vercel (Frontend & Serverless API) / Render (Backend Services)                                                                                      |
| Demo Video Link       | <a href="https://youtu.be/demo-comiccraft-2026">https://youtu.be/demo-comiccraft-2026</a>                                                           |

Step 4: Run Instructions

**Pre-requisites:**

- Node.js v18.x or higher, npm v9.x or higher, Git
- Google Gemini API Key ( `GEMINI_API_KEY` )

**Step 1: Clone the repository**

```
git clone https://github.com/smartbridge-projects/SWTID-2026-6684-ComicCraft.git
cd SWTID-2026-6684-ComicCraft
```

**Step 2: Install dependencies**

```
npm install
```

**Step 3: Configure environment**

```
cp .env.example .env (Set your GEMINI_API_KEY inside .env )
```

**Step 4: Run the application locally**

```
npm run dev
```

**Step 5: Open application in browser**

Open browser at `http://localhost:5173`

Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                                  | Workaround / Status                                                |
|------|---------------------------------------------------------------------------|--------------------------------------------------------------------|
| 1    | API rate-limiting on Gemini free tier when generating > 6 panels rapidly. | Implemented exponential backoff & panel request queuing mechanism. |
| 2    | High memory consumption during multi-panel high-res PDF rendering.        | Client-side canvas rasterization optimized with web workers.       |
